CollaborNet<sup>®</sup> Insights

## Precision Insights Delivered Directly into the Provider Workflow

Say goodbye to patchwork solutions, labor-intensive portals, and inefficient workarounds to get the patient data you need. When it's impossible to share important information when it's needed, improving outcomes for populations or individual patients becomes even more challenging, whether you're operating in a fee-for-service or value-based environment. Consider that:

**“Holon has provided our physicians with extra time with each patient, enhanced clinical decision-making at the point and time of care, and improved our engagement...through data.”**

—Diane Fowler, BSBM, RN, Arizona Center for Internal Medicine

**72%**

OF DOCTORS

don't have all the information they need about their patients.

*2018 Quest Diagnostics Annual Study*

**58%**

OF PROVIDERS

feel that value-based care only creates more work without benefiting patients.

*Humana and AAFP 2017 Value-Based Payment Survey*

**37%**

OF TREATMENT TIME

is already spent working in the EHR instead of providing care.

*Sinsky, Colliga, et al, Annals of Internal Medicine, December 2016*

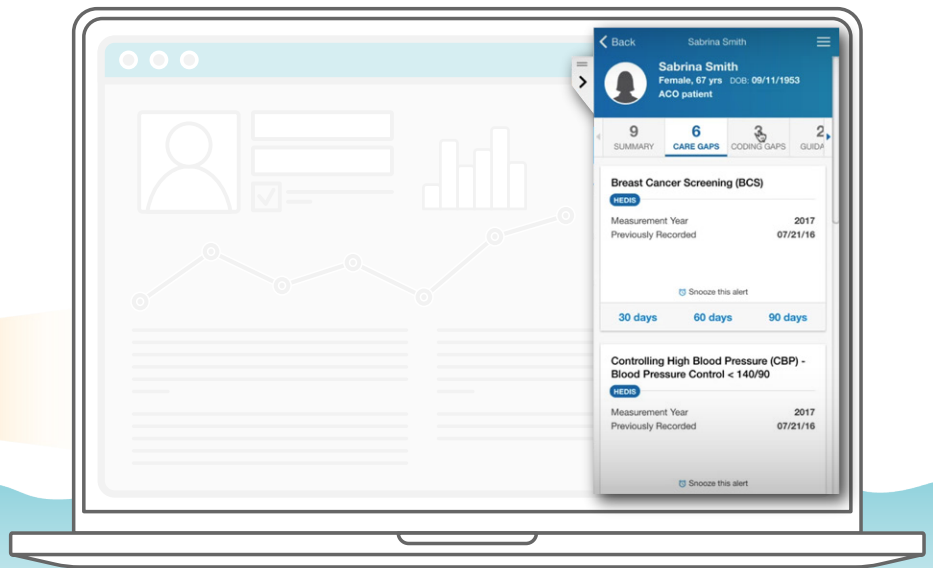

Already used by thousands of providers across hundreds of locations, **Holon's Insights** application empowers healthcare organizations to optimize patient outcomes and financial performance by delivering actionable, patient-specific insights directly to and from the point of care. Through its patented technology, Holon is removing administrative burden from clinicians, allowing them to focus on what matters most.

# CollaborNet *Insights*

## Precision Information Delivery for Healthcare

With *Insights*, providers benefit from a more holistic view of the patient when they need it most — with no interruption to their workflows — enabling more informed decisions that lead to better outcomes and increased success with fee-for-service and value-based care arrangements.

Holon's CollaborNet sensors recognize the patient in context and deliver real-time *Insights* directly within the point-of-care workflow.

### HOW IT WORKS

The patented CollaborNet technology detects and identifies providers as they log into their EMRs and open patient charts.

From there, the *Insights* application automatically sources and delivers relevant patient information from any variety of third-party sources, displaying it in an unobtrusive “ribbon” that displays alongside the patient chart in the EMR.

Seamless, real-time knowledge delivery ensures providers gain access to critical insights when and where they need them, without interrupting their workflows.

### WHAT MAKES IT DIFFERENT

In addition to patented technology that senses providers and patients in context, *Insights* is an inclusive application. That means it can source relevant patient information from any third-party system and deliver it into the provider's EMR without the need for complicated vendor integrations.

### ABOUT HOLON

At Holon Solutions, we're dedicated to making healthcare better for everyone. Our patented technology delivers precise, curated patient insights to providers in their workflows, so they can deliver optimal patient care.
