

Multisource Data When and Where You Need It

MULTI-SOURCE DATA CURATION TO GIVE YOU THE RIGHT INFORMATION, AT THE RIGHT TIME

Say goodbye to inefficient workarounds to get the patient information you need. Holon **Insights** automatically delivers actionable intelligence to care teams within their existing workflows in real time – eliminating the burden of information overload. By distilling wide swaths of data from internal and external sources into practical intelligence, **Insights** offers operational relief so you can restore your focus on providing patient care.

With its personalized interface, **Insights** surfaces information specific to each role, saving hours of time and reducing the chaos that leads to clinician burnout. Every user sees just what they need, when they need it, so they can take the next step efficiently and intuitively. That means both the care team and the entire practice can perform at their best.

Insights solves today's top challenges

72% OF PHYSICIANS

don't have all the information they need about their patients.

2018 Quest Diagnostics Annual Study

58% OF PROVIDERS

say value-based care only creates more work without benefiting patients.

Humana and AAFP 2017 Value-Based Payment Survey

16.23 MINUTES

the average time providers spend in the EHR per patient encounter.

Overhage, McCallie, Annals of Internal Medicine, February 2020

Gain value and operation relief at the point of care

Insights eliminates data silos, integrates with most EHR systems, and delivers the distilled, easy-to-understand information you need to save time, reduce burnout, and thrive in a value-based care environment.

Improve clinician satisfaction and collaboration

Already used by thousands of providers nationwide, **Insights'** intelligent technology ensures care teams have actionable information at their fingertips, allowing them to collaborate effortlessly and focus on what matters most: patient care.

Holon Insights

How it Works

The patented Holon technology senses and identifies providers as they log into their EHRs and open patient charts.

From there, Insights automatically sources and delivers relevant patient information from a wide variety of third-party sources — including health information exchanges and sources tracking social determinants of health. The distilled intelligence appears in an unobtrusive “ribbon” that displays alongside the patient chart in the EHR. Your care teams simply click to reveal real-time care and coding gaps, specific to each clinical role.

Seamless, personalized information delivery ensures your care teams always have access to patient insights when and where they need them, without interrupting their workflows. **No complicated vendor integrations required.**

HOLON PATENTED SENSING TECHNOLOGY

About Holon Solutions

Holon’s intelligent technology distills multi-source patient information and automatically presents it directly within clinical workflows, saving healthcare teams time and relieving the everyday aggravation of digging through heaps of data. Holon is bringing to market a personalized, intelligent system to empower everyone in the healthcare ecosystem to deliver the best care, leading to the best results. Our diverse team of medical and technology experts leverages modern approaches combined with human-centric design focused on a superior user experience at the point of care as well as at the enterprise level. Knowing that technology by itself does not produce results, our dedicated Customer Success professionals personally ensure that clinicians, administrators, and executives realize measurable value from the Holon platform and drive large-scale, systemwide adoption and improvements across the industry.
